

MSFS HudBar V 0.25.0.19

See (new V0.25) indications for updates from the previous version

Display essential Information as Bar or Tile at any side of the primary screen

- Displays essential aircraft and flight information as Bar or Tile
- Supports 1 and 2 engine aircrafts (Prop/Engine RPM, Fuel Flow for each)
- Provides 5 different content profiles which are fully configurable
- The pilot can directly activate Autopilot commands
- Auto Elevator Trim on a click
- Bottom/Top Bars work best with wide screen monitors

Usage

- Deploy the release zip content in a folder (no installer provided or needed)

Best is to start MSFS first, then the Bar

- Start MSFS2020 first and once the Main Menu is shown
- Start FS20_HudBar.exe
- It attempts to connect to the Flight simulator in 5 sec intervals, but shows an error message while it cannot connect
- Note: the shown values are a bit meaningless until the aircraft and flight is live
Also note that the bar is shown on the **++PRIMARY monitor++** at the bottom of the screen

If you are using it the first time, all items except for the MSFS status are unchecked i.e. no further items are shown in the default bar at the bottom of the screen.

– just head straight to the Configuration and check the ones you like (right click the bar – Configure...)!

- **Right** Click the Bar and choose from the pop up menu
 - To **select** a Profile (1..5 - your names)
 - To **Configure..** to check or uncheck the items to be shown
 - To **Exit** and stop the program
- The Hud can be shown as **Bar** or **Tile**
(to be changed in Configuration, default is Bar at the Bottom of the screen)
 - Bar: a full width window attached to the defined side of the screen
 - Tile: a window sized to accommodate the selected items
A Tile can be moved freely along the side where it is attached to

Note: the previous Splitter is no longer available – use Tile and move the tile wherever you want.

What is shown

Fields can be selected to be shown in the Configuration Window

The sequence can be adjusted to your needs in Configuration

From the Left - MSFS indicates if the Bar is connected to the Simulation (**red** if not connected)

Then there are: Trim, Gear, Brakes (Park), Flaps

Followed by: Engine Values, GPS data, Aircraft data and Auto Pilot Indications, Checkpoint meters

Clickable Commands

In general when you see a label with a **dark blue** background and when hovering with the mouse pointer it turns to a hand cursor – the item is actionable.

Autopilot commands

Actionable autopilot command are:

-AP-, HDG, ALT, VS, FLC, NAV and APR

Clicking them will toggle the state if this is supported by the Sim

Setting the BARO to the current pressure

Click BARO to set it to current (same as the keyboard B button)

E-,R-,A-Trim Reset (new V0.22)

Click the label to set the trim value to 0% (reset Trim)

Automatic Elevator Trim (separate item A-ETrim in V0.22)

A-ETrim – Aside from showing the current Elevator Trim % it provides an Auto Elevator Trim function:

Clicking the **A-ETrim** label will activate the Auto Elevator Trim module for about 20 seconds.

It will display **A-ETrim** in **green** color while active - clicking the active module again will switch it off

Note: the module controls the Elevator Trim in a way to level the aircraft towards zero vertical speed.

It may or may not work to your expectation.. so use it only if you feel comfortable with.

Moving a Tile Hud

If a profile is set as **Tile** one is able to move the window along the bound edge of the screen

Movement is available if the cursor shows up as Cross with Arrows

Click the **Left** mouse button and drag the window, it will remain attached to the bound border while moving it

Other information

Checkpoint Lapse Meter: (new V0.22)

- Click one of the CP1..CP3 labels to start the meter, it shows the time elapsed and the distance from the trigger location (Lat/Lon Distance). The label turns **green** when clicked once.
- Click again to re-start the meter – *there is no Stop function, just let it run*

Waypoint Estimates:

WP-VS – Which VS is required to arrive at the next Waypoint at the set altitude given the current GS assuming a straight flight. This requires to have a next Waypoint and its altitude other than zero, the altitude target is ALTP. The target altitude may change to a blue indication and using the AP set altitude when there is no GPS target altitude (=0).

WP-ALT – At which altitude is the aircraft when reaching the next Waypoint given the current GS and VS. This requires to have a next Waypoint.

Configuration

The currently selected one will show up with a **green** background color (here it was “Prop”)

Name and use up to 5 different profiles

Type the profile name into the field of the topmost row (here Prop, Turboprop A, ...)

The screenshot shows the 'Hud Bar - Configuration' window. It has a title bar with a close button. Below the title bar, there are five tabs: 'Prop', 'Turboprop A', 'Turboprop B', 'Essentials', and 'Jet'. The 'Prop' tab is selected and highlighted with a green background. Each tab contains a list of items with checkboxes. The 'Prop' tab has the following items checked: MSFS Status, Aircraft ID, Sim Rate, Auto E-Trim, Elevator Trim, Rudder Trim, Aileron Trim, Outside Air Temp °C, Baro Setting hPa, Gear, Brakes, Flaps, Wind cross / head kt, MAN Pressure inHg, Torque ft/lb, Torque %, Propeller RPM, Engine RPM, Turbine N1, Turbine ITT °C, Engine EGT °C, Fuel Flow pph, Fuel Flow gph, =GPS=, WYP Distance nm, WYP ETE h:mm:ss, Current Track, Groundspeed, Waypoint ALT ft, Estimate VS to WYP@ALT, Estimated ALT @WYP, Aircraft HDG, Aircraft ALT ft, Aircraft RA ft, Aircraft IAS kt, Aircraft VS fpm, Cross track distance nm. The 'Turboprop A' tab has the following items checked: MSFS Status, Sim Rate, Elevator Trim, Rudder Trim, Aileron Trim, Outside Air Temp °C, Baro Setting hPa, Gear, Brakes, Flaps, Torque ft/lb, Torque %, Propeller RPM, Engine RPM, Turbine N1, Turbine ITT °C, Engine EGT °C, Fuel Flow pph, Fuel Flow gph, =GPS=, WYP Distance nm, WYP ETE h:mm:ss, Current Track, Groundspeed, Waypoint ALT ft, Estimate VS to WYP@ALT, Estimated ALT @WYP, Aircraft HDG, Aircraft ALT ft, Aircraft RA ft, Aircraft IAS kt, Aircraft VS fpm. The 'Turboprop B' tab has the following items checked: MSFS Status, Sim Rate, Elevator Trim, Rudder Trim, Aileron Trim, Outside Air Temp °C, Baro Setting hPa, Gear, Brakes, Flaps, Torque ft/lb, Torque %, Propeller RPM, Engine RPM, Turbine N1, Turbine ITT °C, Engine EGT °C, Fuel Flow pph, Fuel Flow gph, =GPS=, WYP Distance nm, WYP ETE h:mm:ss, Current Track, Groundspeed, Waypoint ALT ft, Estimate VS to WYP@ALT, Estimated ALT @WYP, Aircraft HDG, Aircraft ALT ft, Aircraft RA ft, Aircraft IAS kt, Aircraft VS fpm. The 'Essentials' tab has the following items checked: MSFS Status, Aircraft ID, Sim Rate, Elevator Trim, Rudder Trim, Aileron Trim, Outside Air Temp °C, Baro Setting hPa, =GPS=, WYP Distance nm, WYP ETE h:mm:ss, Estimated ALT @WYP, Groundspeed, Baro Setting InHg, Gear, Brakes, Flaps, Torque ft/lb, Torque %, Propeller RPM, Engine RPM, Turbine N1, Turbine ITT °C, Engine EGT °C, Fuel Flow pph, Fuel Flow gph, Current Track, Waypoint ALT ft, Estimate VS to WYP@ALT, Aircraft HDG, Aircraft ALT ft, Aircraft RA ft, Aircraft IAS kt. The 'Jet' tab has the following items checked: Torque ft/lb, Torque %, Propeller RPM, Engine RPM, Turbine N1, Turbine ITT °C, Engine EGT °C, Fuel Flow pph, Fuel Flow gph, =GPS=, WYP Distance nm, WYP ETE h:mm:ss, Bearing to WYP (mag), Current Track, Desired track to WYP, Groundspeed, Cross track distance nm, Waypoint ALT ft, Estimate VS to WYP@ALT, Estimated ALT @WYP, Aircraft HDG, Aircraft ALT ft, Aircraft RA ft, Aircraft IAS kt, Aircraft TAS kt, Aircraft VS fpm, Autopilot Master, AP HDG / Set, AP ALT / Set, AP VS / Set, AP FLC / Set, AP NAV and GPS, AP APR and GS. At the bottom of the window, there are settings for font size (Plus_4 Font Size, Plus_12 Font Size), alignment (Left bound, Bottom bound, Title), font type (Regular Font, Condensed Font), and checkboxes for 'Opaque Background' and 'Show Units'. There are 'Accept' and 'Cancel' buttons at the bottom right.

General Settings are:

- Check **Show Units** to display the units along the values
- Check **Opaque Background** to have the Bar completely black, else it is slightly transparent

For any profile:

- Check / Uncheck the items in the list which to show / hide items
- Select a **Fontsize** from Regular, Plus-2, -4, -6, -8, -10, Minus-2, -4, Plus-12, -14 (new V0.23) (the bar rescales to multiple rows/columns to fit all checked items on the screen)
- Select the **Alignment** of the bar for any profile (left, right, top, bottom)
- Select the **Kind** of the bar – where **Bar** is a full width or height band and **Tile** is a rectangle bound to the Alignment border, the size of the tile will adapt to the items shown
- Select from **Regular** or **Condensed** Font type (new V0.25)

➔ Checked items are shown in either horizontal or vertical order as they are shown in the configuration panel.

See below how to re-arrange the order here and to apply new lines

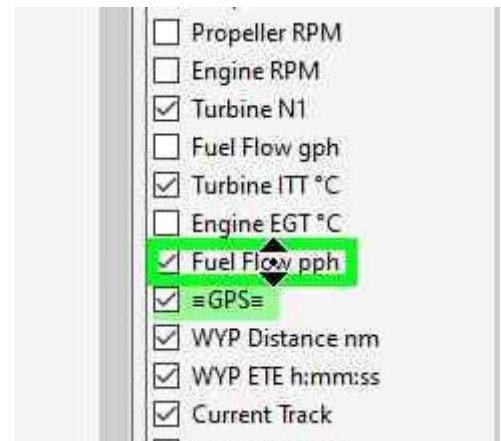

Move an item within a bar:

Works about the same as Drag and Drop

- **Left** Click and hold the item which will be moved
- Move the mouse up or down – the cursor will change to a NS sign
- Drop (**Release** the mouse button) – the item should appear at the drop position

Note: Due to the rearrangement of the affected items the behavior is different if you move an item up or down – sometimes you need a second drag to place it where you want it to be

- Hit **Escape** or move the mouse out of the drop zone and release the mouse button if you wish to cancel the movement

Start a new line for the item and its successors:

- **Right** click an item to start it on a new line/column in the Hud
- New Lines are indicated with items that have a **light green** background color (e.g -GPS- above)
- **Right** click again to remove the New Line – the background color reverts to light gray

Note: if the New Line item is unchecked the line break is omitted

Leaving the Configuration Window

- Click **Accept** to accept all changes made to the configuration
- Click **Cancel** to discard all changes made
- The window will close and the Hud is rebuilt according to the profile

All settings are automatically saved and should be available for any further use

Available Info Fields

For Engine related fields the Bar shows up to 2 Engines.

Once a 2 Engine aircraft is detected the left one is Engine 1 and the second/right one Engine 2

SimRate x : the current Sim Rate factor – if not x1 it is shown with **yellow** background

ID: the aircraft ID (new V0.23)

E-, R-, A-Trim: Elevator, Rudder, Aileron Trim % values +- deflection (click the label to Zero Trim (new V0.22))

A-ETrim: Elevator Trim % value with clickable Auto Elevator Trim (separate item in V0.22)

OAT: Outside Air Temperature (only in °C – sorry...)

BARO: Setting is available as InHg or HPA – chose one that fits the needs

WIND: Setting is available as Dir° @ Speed kt or Cross- / Head-Tail Wind kt (new V0.25)

AoA: Angle of attack degrees (new V0.23)

Gear: either Up, down or Unknown (Transient)   

Brakes: Parking Brake indication - Set:  Released: •

Flaps: either full up, down or steps in-between (depends on the number of steps available)     

TORQ: Engine torque value is available as ft/lb or % – chose one that fits the needs

P-RPM: Propeller RPM Value

E-RPM: Engine RPM Value

N1: Turbine N1 % Value

ITT: Turbine ITT Temperature in °C

EGT: Engine Exhaust Gas Temperature in °C

MAN: Manifold Pressure inHg (new V0.22)

FFLOW: Fuel Flow value is available as pounds per hour or gallons per hour – chose one that fits the needs

F-LR: Fuel quantity Left / Right as gallons (only gal available) (new V0.25)

F-TOT: Fuel quantity Total as gallons (only gal available) (new V0.25)

-GPS- Shows the previous and next Waypoint if a flight plan is active

WYP DIST shows the GPS Distance to the next Waypoint

WYP ETE shows the GPS Estimated Time Enroute to the next Waypoint

BRG shows the GPS magnetic bearing to the next Waypoint (new V0.23)

TRK shows the GPS ground track

DTK shows the GPS desired track to the next Waypoint (new V0.23)

XTK shows the GPS cross track distance in nm (new V0.23)

GS shows the GPS ground speed

ALTP shows the GPS Waypoint Altitude if it is available

Calculated fields when a "Next Waypoint" is available:

- **WP-VS** Estimated VS to WYP@ALT:
Calculated VS to reach the next waypoint at the proposed altitude with the current GS and DIST (ALTP altitude when purple or Setting Alt when blue)
- **WP-ALT** Estimated ALT@WYP:
Calculated altitude at next waypoint using the actual GS, VS and DIST

Note: the calculated fields are experimental they are rounded to the nearest 100.

HDG: Current Heading

ALT: Current Altitude (ft)

RA: Radio Altitude (ft AOG) available when <1000ft AOG

IAS: Indicated Airspeed (kt)

TAS: True Airspeed (kt) (new V0.23)

Mach: Mach number (M) (new V0.25)

VS: Vertical rate (feet per minute)

-AP-: Autopilot Master (all Autopilot signs turn to **Green text** if active)

HDG: Heading Mode Sign and Heading Setting

ALT: Altitude Mode Sign and Altitude Setting (ft)

VS: Vertical Rate Sign and VS Setting (fpm)

FLC: Flight Level Change Sign and IAS Setting (kt)

NAV: Nav Mode Sign and GPS Source – GPS active source shown in **purple** letters else if NAV is guiding the GPS label is greyed out

APR: Approach Mode Sign and Glide Slope/Path (>GS<) Capture. GS turns **green** if captured

CP1..3: Checkpoints to track elapsed time and Lat/Lon distance from start point
click a CPn label to start tracking, it turns **green** while tracking, click again to set a new start point
(new V0.22)

My FlightSim Libraries (included in the release package)

- SimConnectClient.dll -- FlightSim interface to MSFS2020 SimConnect
- FSimClientIF.dll -- Generic FSim Client interface definition
- FSimIF.dll -- Generic FSim interface definition

From MSFS2020 Developer Kit for convenience included:

- SimConnect.cfg
- Microsoft.FlightSimulator.SimConnect.dll
- SimConnect.dll
