Content

News V0.71

- Add 3 more Flightphases per Checklist (F,G,H)
- Add Next Phase button at the end of each Checklist
- Add Button Color Amber (in Config)
- Update Config Dialog sizeable and stores location

Usage

- Deploy the release all zip content in a folder (no installer provided or needed)
- Start FS20_ChecklistBox.exe

Checklist Box

Simple Checklist for the Pilot.

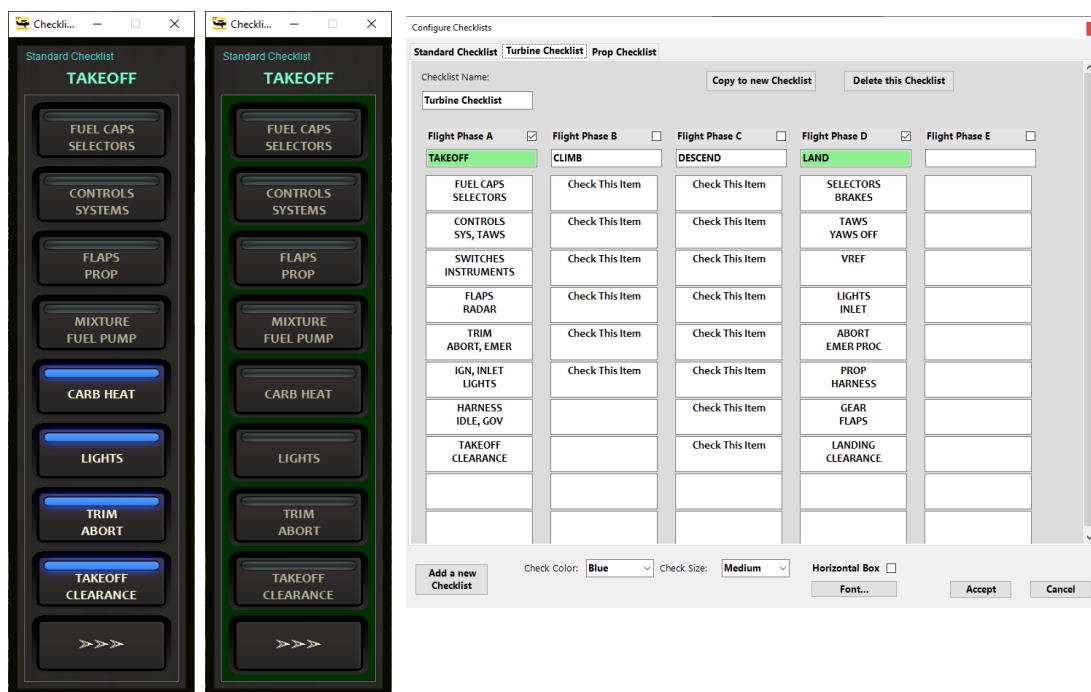

Checklist –> Phase –> Check

- Item checking goes along the Airbus logic i.e. Checked (OK) is dark, unchecked is lit up
- Once all items are checked it is framed with a dark green band
- The number of definable Checklists is limited to 30 for practical reasons. (V0.71 update)
- There are up to 8 Flight Phases per checklist with up to 10 Check items per Phase. (V0.71 update)
- In Configuration mark the Phases to be used - the Phase name will highlight with green background.
- Leave a Check item text field empty and it will not show as button
- The text for all items is editable where the number of characters for the List and Phase names is max. 25.
- Text for Check items is not constraint but the button only shows 2 lines
  Enter (Return) is allowed for line breaks
- Right Click an empty area in the Box for a context menu to choose from:
  The Phase to check, the checklist to use, reset all checked items, Configure, Hide
- Selecting a new Phase will start with all items unchecked
- The last button (with arrows) will switch to the next phase of the selected checklist (V0.71 new)
- Use to **HudBar** Context Menu to Show/Hide the Checklist Box (or an assigned Hotkey)

Configuration:

There is one Tab per Checklist. Edit any field you wish. Check a Phase to get it selectable in the Context Menu. Add a new Checklist (Tab) at the end. Copy an existing to a new (at the end of the Tabs). Delete a Checklist.

Use the **Horizontal Box** check field to switch the orientation, there are 6 LED colors and 3 sizes available. (V0.71 update)

Leave Configuration with **Accept** to save or **Cancel** to ignore ALL changes.

While changing the **Font** the check text entries are rescaled to approx. fit the Check Button layout, though it is not 'exact'.

HotKey Binding for the HudBar Version

Show/Hide can be assigned to a **keyboard shortcut**. It is also mapped to a MSFS command (ADF2_RADIO_TENTHS_DEC), both must be enabled in Configuration.

See also in the HudBar Quick Guide.

HotKey Binding for the HudBar Version

Show/Hide can be assigned to a **keyboard shortcut**. It is also mapped to a MSFS command (ADF2_RADIO_TENTHS_DEC), both must be enabled in Configuration.
